Summary

I am continuously learning on my own, and throughout my 3+ year career, I have produced results by creating analytical conclusions, developing machine learning models, and cleaning data.

Professional Experience

Freelance | Self-employed | Remote | January 2026 – Present

- Consults business needs to develop AI, data management solutions, and programs.

Python Developer | GlobalLogic | Remote | April 2024 – December 2024

- Optimized over 100 REST API calls to clean and gather data for structuring LLM responses.
- Analyzed over 100 coding explanations and programs written in Python, SQL, Java, and C++ generated by Fortune Tech 10 company's LLM.
- Cleaning data contributed to the LLM's accuracy increasing by 15%

Support Engineer (Python Developer) | Qualcomm Inc. | San Diego, CA | May 2022 – December 2023

- Streamlined eye gaze data entry by an internal labelling tool to increase productivity by 60%
- Simulated the cameras of the Meta Quest Pro and other headset designs by rendering 3D meshes of 3D captured humans in Blender and OpenCV to prototype the hardware. Processed data from a CSV file using Pandas and calculated the 3D geometry in NumPy to find placements for the cameras.
- The data pipeline created to automate the 3D renders saved 40% of the time that it would take to process the training data by manually placing the cameras, lights, and meshes.
- Streamlined eye gaze data entry by an internal labelling tool to increase productivity by 60%
- Automated the download of over 20,000 images by integrating a RESTful API into Python code, increasing the training data to improve the performance of machine learning models
- Facilitated communications with third-party data vendors by organizing over 50 meetings, increasing data quality for labels on Azure Data Factory, and transferring it to an on-premises server

Research Assistant | Chapman University | Orange, CA | September 2021 – December 2021

- Designed an Extract, Transform, Load (ETL) pipeline with NumPy and Pandas in Python
- Automated a manual workflow using R using time series clustering to analyze patients' stress, depression, and anxiety to find 2 major trends in the data on the effects of therapy.

Certifications

Generative AI with Large Language Models | DeepLearning.AI and AWS | Issued September 2024

Deep Learning Specialization | DeepLearning.AI | Issued December 2023

Education

Master of Science (M.S.) in Computational and Data Sciences | (3.419/4.0) |

February 2021 – December 2021 | Chapman University (Orange, CA)

Bachelor of Science (B.S.) in Computer Science | Mathematics Minor | (3.282/4.0) |

August 2017 – December 2020 | Chapman University (Orange, CA)

Projects

Render Around

- Using Blender to render left, right, front, behind, and top views of a mesh

Dow Jones Dividend Analysis

- Worked to discover a correlation if stocks with higher dividends were traded more by investors
- Coded a script in R finding no correlation between dividends and volumes for the Dow Jones

Analyzing Medical Practitioner Stress

- Developed decision trees and neural networks to find what makes medical workers stressed

Markov Music

- A Python scripted Markov Chain model to learn patterns in song lyrics to generate songs.

Skills

Programming languages Python, Java, SQL, Scala, R, C, C++, MATLAB, C#, HTML, CSS

Development tools, libraries, frameworks MongoDB, PostgreSQL, MySQL, Apache Airflow, Git, Docker, Jenkins (for CI/CD), Amazon Web Services (AWS), Apache Spark (through PySpark), Keras, TensorFlow, PyTorch, Scikit-Learn, OpenCV, Pandas, NumPy, matplotlib, Flask
